

I created an e-commerce website for final exam. There were two main reasons for me to choose this topic. First, after building the website, I can actually use it to start my own business, secondly, I already got a team who does this business without a website so that, after creating the website I could offer it to them and sell it.

The website contains three HTML pages including home, products and contact. All the pages include the same heading, which includes the logo of the company, (there is no logo at the moment, can be changed without problem) the three links to jump to other pages and three icons that includes additional functions (favorites, cart and account). The header is made responsive. For devices with smaller screen than 768px, there is a bar icon and the links to jump to other pages pop up once it is clicked. In the home page, there is a section after the header, that includes slideshow of Nike sneakers. There is the name, price of the sneakers with some paragraph and a button on the left side of the section and the image of the sneakers on the right side of it. The section is responsive and for tablet or phone sized devices, the info and image of the product are in horizontal order. The next section of the home section is Team weblog, that represents the team members whose names are Azeem, Otabek and Mansur, with ratings that have been given by the customers. The last part of the home page is footer. In this case, I chose not to include any information and just wrote "THIS WEB SITE WAS CREATED TO FULFILL WEB TECHNOLOGIES MODULE'S REQUIREMENTS AND DOES NOT REPRESENT ACTUAL COMPANY OR SERVICE." As it was compulsory to add this, I chose to do it in the footer section and not other sections as I thought it might ruin the design of the website. The same footer is used for all the pages of the website.

The next page of the website is Products. It includes two main sections with header and footer, they are product and featured sections. In the product section there are common sneakers for customers to choose, when they hover over the products, three icons pop up on the upper-left part of the picture and the image gets bigger. In the featured section, there are five different sneakers with images that have been taken from different angles on the left side and the name, price of the sneakers with "add to cart" button on the right side of it. The images, taken from different angles can be clicked and the main picture changes to the clicked image. This is done by JS. Both sections are responsive, for devices with small width, the product info and the product image are in horizontal order with images on top.

The last page of the website is contact. The contact page includes header, footer and one section in the middle of them. On the right side of the section, there is a form for customers to contact with the company, the customers would write their full name, email address, phone number and their website and there is an additional text area for customers to leave their message and there is a submit button at the end. On the left of the section, there are three icons for decoration. This icon is made responsive. The icons move to the upper side of the form when the device's width is 768px or smaller than that.
